

WATER SUPPLY PLAN

**Automatic
Exemption if
Assured Water
Supply Designation**

**May request an exemption if
Adequate Water Supply
Designation, and submitted info
meets requirements**

- 1) A list and description of:
 - A. Service area lands
 - B. Sources of supply, including emergency sources
 - C. Well registration numbers and water levels at the well sites (if known)
 - D. Storage and treatment facilities

- 2) A map and description of existing transmission and distribution facilities*

Note - A map is not required for small community water systems

- 3) Description of:
 - A. Monthly system production data categorized by the system's sources of supply
 - B. For systems that use meters to measure withdrawals and diversions:
 - i. A summary of system average daily demands
 - ii. Maximum monthly demands
 - iii. An estimate of peak day demands for the past five years

Note - For systems that are not metered, this requirement (3B) does not apply.

- 4) A list, description and map of:
 - A. Existing interconnections*

Note - A map is not required for small community water systems

B. Quantities of water sold to or purchased from other water systems during the previous five years.**

- 5) An analysis of present and future water supply demands for the next five, ten and twenty years.

* Unless previously provided pursuant to A.R.S. § 45-498 which requires that each city, town, private water company and irrigation district within an active management area maintain a current map clearly delineating its service area and distribution system.

** Unless previously provided pursuant to A.R.S. § 45-632, which requires that each person who is required to file an annual report maintain current accurate records of withdrawals, transportation, deliveries and use of groundwater.
